Introduction

In this lab, you will launch an instance with the *Horizon Dashboard* and the *OpenStack Unified CLI*.

Objectives

- Use the *Horizon Dashboard*.
- Launch an instance with the *Horizon Dashboard*.
- Use the *OpenStack Unified CLI*.
- Launch an instance with the *OpenStack Unified CLI*.

Lab Settings

The information in the table below will be needed in order to complete the lab. The task sections below provide details on the use of this information.

Virtual Machine	IP Address	Account	Password
workstation	ens3: 192.168.1.21 ens4: 172.25.250.21	ubuntu	ubuntu
devstack	ens3: 192.168.20 ens4: 172.25.250.20	ubuntu	ubuntu

1 Launching an Instance with the Horizon Dashboard

In this task, you will launch an instance with the *Horizon Dashboard*.

- 1.1. Log into the **workstation** machine as the **ubuntu** user with password **ubuntu**.

```
Ubuntu 18.04.6 LTS workstation tty1
workstation login: ubuntu
Password:
```

- 1.2. Launch the graphical user interface.

```
ubuntu@workstation:~$ startx
```

```
Welcome to Ubuntu 18.04.6 LTS (GNU/Linux 4.15.0-213-generic x86_64)

* Documentation:  https://help.ubuntu.com
* Management:    https://landscape.canonical.com
* Support:       https://ubuntu.com/advantage

System information as of Fri Jun  7 21:01:55 UTC 2024

System load:  0.6               Processes:            197
Usage of /:   7.9% of 116.12GB  Users logged in:     0
Memory usage: 13%              IP address for ens3: 192.168.1.21
Swap usage:   0%               IP address for ens4: 172.25.250.21

Expanded Security Maintenance for Infrastructure is not enabled.

2 updates can be applied immediately.
To see these additional updates run: apt list --upgradable

146 additional security updates can be applied with ESM Infra.
Learn more about enabling ESM Infra service for Ubuntu 18.04 at
https://ubuntu.com/18-04

ubuntu@workstation:~$ startx_
```

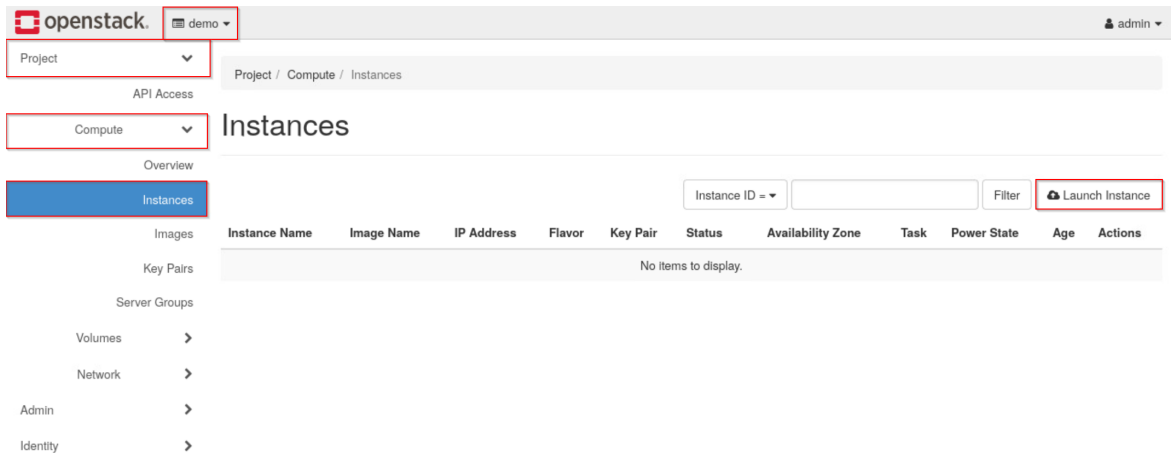

1.3. Open the web browser.

1.4. Enter the IP address of the **devstack** machine (**192.168.1.20**) into the address bar, and log into the OpenStack Horizon Dashboard with username **admin** and password **secret**.

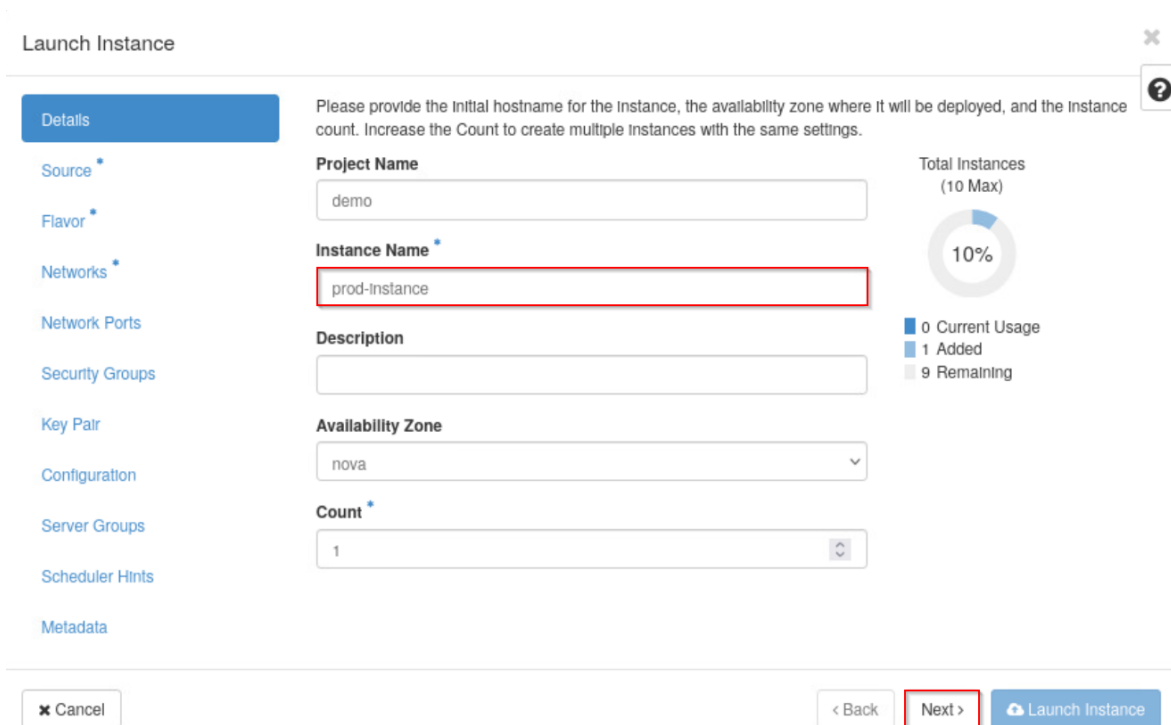

The image shows the OpenStack Horizon login page. At the top is the OpenStack logo, a red square with a white 'O' inside. Below the logo is the text 'openstack.' in a large, bold, black font. Underneath is the text 'Log in' in a smaller, bold, black font. There are two input fields: 'User Name' with the text 'admin' and 'Password' with a series of dots. Both fields are outlined with a red border. At the bottom right is a blue button with the text 'Sign In' in white.

- 1.5. Click on the dropdown menu in the top left corner of the webpage, then select **demo** as the project. Navigate to **Project > Compute > Instances**, then click **Launch Instance** in the top right corner.

The screenshot shows the OpenStack dashboard interface. In the top left, the 'demo' project is selected. The breadcrumb navigation shows 'Project / Compute / Instances'. The left sidebar has 'Instances' selected under the 'Compute' section. In the top right, the 'Launch Instance' button is highlighted with a red box. Below the navigation, a table for instances is shown with the message 'No items to display.'

- 1.6. In the *Instance Name* field, type **prod-instance**, and leave the other fields with their default values. Click **Next**.

The screenshot shows the 'Launch Instance' form. The 'Project Name' is 'demo'. The 'Instance Name' field contains 'prod-instance' and is highlighted with a red box. The 'Availability Zone' is set to 'nova'. The 'Count' is set to '1'. On the right, a circular progress indicator shows 'Total Instances (10 Max)' with '10%' completed. A legend indicates: 0 Current Usage, 1 Added, and 9 Remaining. At the bottom, the 'Next >' button is highlighted with a red box.

- 1.7. In the *Select Boot Source* dropdown, **Image** should already be selected. Set *Create New Volume* to **No**, and scroll down (if needed) to click the ↑ icon beside of **ubuntu** to use **ubuntu** as the image. Click **Next**.

Launch Instance

Instance source is the template used to create an instance. You can use an image, a snapshot of an instance (image snapshot), a volume or a volume snapshot (if enabled). You can also choose to use persistent storage by creating a new volume.

Cancel < Back Next > Launch Instance

Stop

Before proceeding to the next step, confirm that **ubuntu** appears underneath the *Allocated* section.

1.8. Scroll down (if needed) and click the ↑ icon beside the **m1.small** flavor. Click **Next**.

Launch Instance

Flavors manage the sizing for the compute, memory and storage capacity of the instance.

Launch Instance

Stop

Wait for the *Power State* of **prod-instance** to display the status of *Running* before continuing to the next step.

- 1.11. To open the console of **prod-instance** in a new tab, right-click the name **prod-instance** and select **Open Link in New Tab**, or middle-click (press in the mouse wheel) the name **prod-instance**.

Open Link in New Tab

Open Link in New Window

Open Link in New Private Window

Bookmark Link...

Save Link As...

Save Link to Pocket

Copy Link

Search Google for "prod-instance"

Inspect (Q)

- 1.12. In the new tab, click the *Console* tab. Optionally, to make the console take up the whole tab, click the **Click here to show only console** link.

- 1.13. Log into the console as **root** with the password **secret**.

Note

It may take several minutes for the instance to fully boot up and present a login prompt.

- 1.14. In the console, ping **192.168.233.2** (DHCP server) to verify connectivity.

```
$ ping -c3 192.168.233.2
```

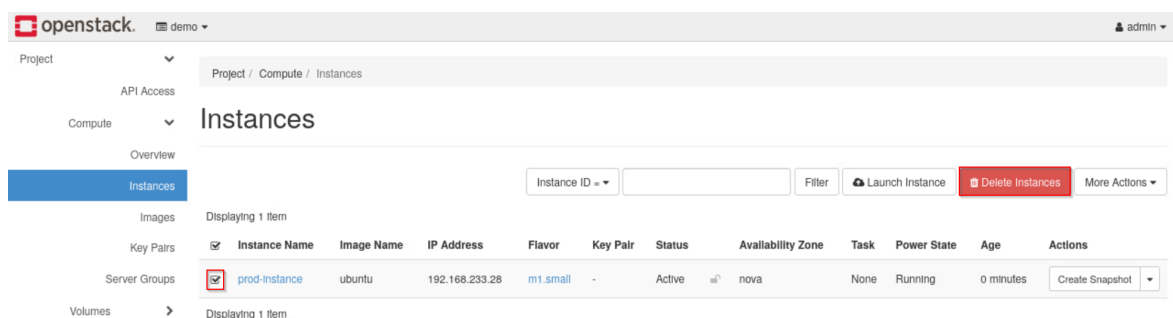

Note

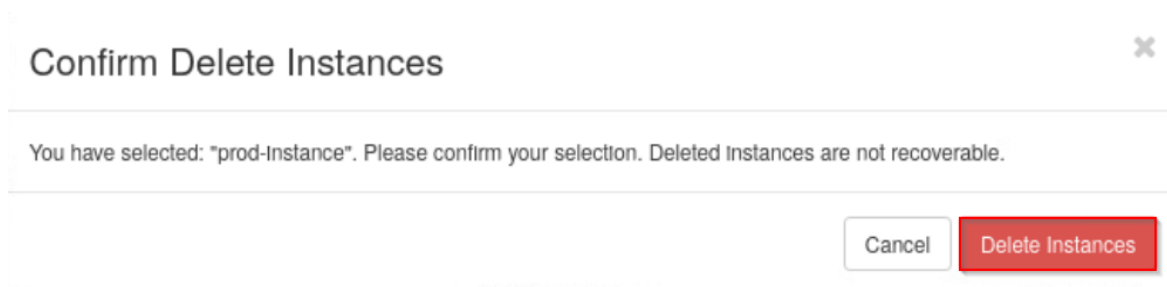

You should receive three successful ping replies.

- 1.15. Close the console tab for **prod-instance**.

- 1.16. Focus back on the tab showing instances and delete **prod-instance**. Select the checkbox for **prod-instance** and click the **Delete Instances** button.

1.17. Confirm the deletion by clicking the **Delete Instances** button.

1.18. Close the web browser. Continue to the next task.

2 Running the OpenStack Unified CLI

In this task, you will launch an instance with the *OpenStack Unified command-line interface (CLI)*.

- 2.1. Open a terminal by clicking the terminal icon in the icon bar at the bottom of the screen. A terminal can also be opened by right-clicking the desktop and selecting **Open Terminal Here**, or by selecting **Applications** at the top left of the screen, then selecting **Terminal Emulator**.

- 2.2. Source the **keystonerc-admin** file. This will provide a connection with the local OpenStack service with the credentials of the **admin** user, and the command prompt will change to indicate the current OpenStack user whose credentials are keyed in.

```
ubuntu@workstation:~$ source ~/keystonerc-admin
```

```
ubuntu@workstation:~$ source ~/keystonerc-admin  
[ubuntu@workstation (keystone-admin)]:~$
```

Note

keystonerc files will be discussed in more depth in a future lab.

- 2.3. The OpenStack CLI is now ready to use, allowing us to create an instance. Just like in the Horizon Dashboard, an image, a flavor, and a network are required. Before launching an instance, we will list the available options for these resources. First, list all available images.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack image list
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack image list
+-----+-----+-----+
| ID | Name | Status |

+-----+-----+
[ubuntu@workstation (keystone-admin)]:~$
```

Tip

The UUID for the instance **prod-instance** can be used in place of **prod-instance** in the above command to identify the instance.

- 2.10. Display the instance's console URL. Then right-click on the URL and select **Open Link**.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack console url show prod-instance
```

Field	Value
type	novnc
url	http://192.168.1.20:6080/vnc_lite.html?path=%3Ftoken%3D3fe6f85c-3540-47f3-bd8f-657b249938cb

```
[ubuntu@workstation (keystone-admin)]:~$
```

- 2.11. The web browser will open directly to the instance's console through noVNC. Log into **prod-instance** using **root** as the username and **secret** as the password. Then use the **ping** command to verify connectivity with the DHCP server (**192.168.233.2**).

```
$ ping -c3 192.168.233.2
```

```
Connected to QEMU (Instance-00000002)
root@prod-instance:~# ping -c3 192.168.233.2
PING 192.168.233.2 (192.168.233.2) 56(84) bytes of data:

64 bytes from 192.168.233.2: icmp_seq=2 ttl=64 time=3.25 ms
64 bytes from 192.168.233.2: icmp_seq=3 ttl=64 time=1.59 ms

--- 192.168.233.2 ping statistics ---
3 packets transmitted, 3 received, 0% packet loss, time 2005ms
rtt min/avg/max/mdev = 1.585/3.559/5.849/1.754 ms
root@prod-instance:~#
```

Note

You should receive three successful ping replies.

- 2.12. Close the web browser and change focus back to the previous terminal window.
- 2.13. The instance is now ready to be deleted, but first list the servers so that the effect of the next step can be observed.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack server list
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack server list
```

ID	Name	Status	Networks	Image	Flavor
c67ff809-ff02-443f-9015-c30dbb33e45d	prod-instance	ACTIVE	shared=192.168.233.166	ubuntu	m1.small

```
[ubuntu@workstation (keystone-admin)]:~$
```

2.14. Delete the instance.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack server delete prod-instance
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack server delete prod-instance  
[ubuntu@workstation (keystone-admin)]:~$ █
```

2.15. Ensure that the instance was deleted by seeing that the server list is empty.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack server list
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack server list  
[ubuntu@workstation (keystone-admin)]:~$ █
```

2.16. The lab is now complete.

A OpenStack Unified CLI Help

The OpenStack Unified CLI has many commands. Thankfully, they follow a predictable form:

```
openstack [<global-options>] <object-1> <action> [<object-2>] [<command-arguments>]
```

Items in square brackets indicate that they are not present in every command. For instance,

```
openstack image list
```

contains only one object and an action. We will encounter more complex commands in the future, but it is good to keep this common structure in mind. For more information on the structure of OpenStack CLI commands, visit the [Command Structure Documentation](#).

To see what actions can be performed on a given object, it is always possible to run a command structured like this:

```
openstack <object> --help
```

For instance, to see what actions you can perform on instances, you can run the command

```
openstack instance --help
```

Other objects include **image**, **flavor**, **network**, and many more that will appear throughout the labs.

Additionally, to see what parameters you can pass to an action, you can run a command structured like this:

```
openstack <object> <action> --help
```

for instance, to see what parameters you can set on an instance, you can run the command

```
openstack server set --help
```

Other object actions include **server list**, **flavor show**, **network create**, and many more that will appear throughout the labs.
