## Introduction

In this lab, you will launch an instance using the *Horizon Dashboard*, launch an instance using the *OpenStack Unified CLI*, and use the *OpenStack Unified CLI*.

## Objectives

- Use the *Horizon Dashboard*.
- Launch an instance using the *Horizon Dashboard*.
- Use the *OpenStack Unified CLI*.
- Launch an instance using the *OpenStack Unified CLI*.

## Lab Settings

The information in the table below will be needed in order to complete the lab. The task sections below provide details on the use of this information.

Virtual Machine	IP Address	Account	Password
workstation	ens3: 192.168.1.23 ens4: 172.25.250.23	ubuntu	ubuntu
devstack	ens3: 192.168.1.22 ens4: 172.25.250.22	ubuntu	ubuntu

## 1 Launching an Instance Using the Horizon Dashboard

In this task, you will launch an instance using the *Horizon Dashboard*.

1. Log into the **workstation** machine as the **ubuntu** user with password **ubuntu**.
2. Open the web browser.

3. Enter the IP address of the **devstack** machine (**192.168.1.22**) into the address bar, and log into the OpenStack Horizon Dashboard. The username is **admin** and the password is **secret**.

A screenshot of the OpenStack Horizon Dashboard login page. The page features the OpenStack logo at the top. Below it, the word "openstack" is written in a large, lowercase, sans-serif font. The main area is titled "Log in". It contains two input fields: "User Name" with "admin" typed in, and "Password" with "secret" typed in. Both the "User Name" and "Password" fields are highlighted with a red box. To the right of the "Password" field is an "eye" icon for password visibility. At the bottom right of the form is a blue "Sign In" button.

4. Click on the *Project* tab in the top right corner of the webpage, then select **demo** as the project.

5. Navigate to the *Instances* panel and click **Launch Instance** in the top right corner.

## Lab 01: Launching an Instance

The screenshot shows the OpenStack Compute Instances page. The 'Instances' tab is selected. The table header includes columns for Instance Name, Image Name, IP Address, Flavor, Key Pair, Status, Availability Zone, Task, Power State, Age, and Actions. A red box highlights the 'Launch Instance' button at the top right.

6. In the *Instance Name* field, type **prod-instance**, and leave the other fields with their default values. Click **Next**.

The screenshot shows the 'Launch Instance' dialog box. The 'Details' tab is selected. The 'Instance Name' field contains 'prod-instance' and is highlighted with a red box. Other fields include Project Name (demo), Description (empty), Availability Zone (nova), and Count (1). A circular progress bar shows 10% usage. Buttons at the bottom include 'Cancel', '< Back', 'Next >', and 'Launch Instance'.

7. In the *Select Boot Source* drop down, select **Image**, set *Create New Volume* to **No** and scroll down (if needed) to click the ↑ icon beside of **ubuntu** to use **ubuntu** as the image. Click **Next**.

Launch Instance

Details	Instance source is the template used to create an Instance. You can use an Image, a snapshot of an Instance (Image snapshot), a volume or a volume snapshot (if enabled). You can also choose to use persistent storage by creating a new volume.				
<b>Source *</b>	<b>Select Boot Source</b> <input type="button" value="Image"/> <input type="button" value="Create New Volume"/> <input checked="" type="radio"/> Yes <input type="radio"/> No

## Lab 01: Launching an Instance

### Stop

Wait for the **Power State** of **prod-instance** to display the status of *Running* before continuing to the next step.

- In the new tab, click the *Console* tab. Optionally, to make the console take up the whole tab, click the **Click here to show only console** link.

- Log into the console as **root** with the password **secret**.
- In the console, ping **192.168.233.2** (DHCP server) to verify connectivity.

```
$ ping -c3 192.168.233.2
```

```
Connected to QEMU (instance-00000003)
root@prod-instance:~# ping -c3 192.168.233.2
PING 192.168.233.2 (192.168.233.2) 56(84) bytes of data.

root@prod-instance:~# _
```

### Note

You should have received three successful ping replies.

- Close the console tab for **prod-instance**.
- Focus back on the tab showing instances and delete **prod-instance**. Select the checkbox for **prod-instance** and click the **Delete Instances** button.

Instance ID	Filter	Launch Instance	Delete Instances	More Actions						
			<input checked="" type="checkbox"/>							
prod-instance	ubuntu	192.168.233.28	m1.small	-	Active	nova	None	Running	0 minutes	Create Snapshot

16. Confirm the deletion by clicking the **Delete Instances** button.

### Confirm Delete Instances

You have selected: "prod-Instance". Please confirm your selection. Deleted Instances are not recoverable.

Cancel

Delete Instances

17. Close the web browser.

## 2 Running the OpenStack Unified CLI

In this task, you will use the *OpenStack Unified command-line interface (CLI)* to list and check the details of existing projects, users, flavors, images, and instances, and to launch an instance.

1. Open a terminal, either by right-clicking the desktop and selecting **Open Terminal Here**, by clicking the terminal icon in the icon bar at the bottom of the screen, or by selecting **Applications** at the top left of the screen, then selecting **Terminal Emulator**.

2. The **keystonerc-admin** file in the home directory defines several OS\_\* environment variables that allow you to use the OpenStack platform on the **devstack** server through the OpenStack Unified CLI. The username will be **admin**, the password will be **secret**, the project will be **demo**, and the IP address for **OS\_AUTH\_URL** is the IP address of the **devstack** server, **192.168.1.22**. You can run cat on the file to view its contents.

```
ubuntu@workstation:~$ cat ~/keystonerc-admin
```

```
ubuntu@workstation:~$ cat ~/keystonerc-admin
unset OS_SERVICE_TOKEN
unset OS_TENANT_ID
unset OS_TENANT_NAME
export OS_USERNAME=admin
export OS_PASSWORD=secret
export OS_AUTH_URL=http://192.168.1.22/identity
export OS_REGION_NAME=RegionOne
export OS_PROJECT_NAME=demo
export OS_INTERFACE=public
export OS_IDENTITY_API_VERSION=3
ubuntu@workstation:~$ █
```

3. Use the source command with the **keystonerc-admin** argument to enable all the OS\_\* environment variables included in the **keystonerc-admin** file.

```
ubuntu@workstation:~$ source ~/keystonerc-admin
```

```
ubuntu@workstation:~$ source ~/keystonerc-admin
ubuntu@workstation:~$ █
```

4. Verify that the OS\_\* environment variables have been exported to the shell environment.

```
ubuntu@workstation:~$ env | grep OS_
```

```
ubuntu@workstation:~$ env | grep OS_
OS_AUTH_URL=http://192.168.1.22/identity
OS_REGION_NAME=RegionOne
OS_PROJECT_NAME=demo
OS_IDENTITY_API_VERSION=3
OS_INTERFACE=public
OS_PASSWORD=secret
OS_USERNAME=admin
ubuntu@workstation:~$ █
```

**Tip**

Use the `openstack help project show` command to determine how to display the details of a particular project.

- Enter the command below to gather additional information about the **admin** user's current project, **demo**.

```
ubuntu@workstation:~$ openstack project show demo
```

```
ubuntu@workstation:~$ openstack project show demo
+-----+-----+
| Field | Value |
+-----+-----+
| description |          |
| domain_id | default |
| enabled | True   |
| id | ac77ab3519ac4a588dfefcb7d7c31085 |
| is_domain | False  |
| name | demo   |
| options | {}    |
| parent_id | default |
| tags | []    |
+-----+-----+
ubuntu@workstation:~$ █
```

**Note**

The ID value for **demo** may differ from above since it is a unique ID.

**Tip**

Use the `openstack help user show` command to determine how to display details of a specific user account.

- Enter the command below to check the details of **admin**.

```
ubuntu@workstation:~$ openstack user show admin
```

```
ubuntu@workstation:~$ openstack user show admin
+-----+-----+
| Field | Value |
+-----+-----+
| domain_id | default |
| enabled | True   |
| id | d20b6b5676724f12b891563fee6b62fd |
| name | admin  |
| options | {}    |
| password_expires_at | None |
+-----+-----+
ubuntu@workstation:~$ █
```

**Tip**

Use the `openstack flavor list` command to determine how to display all available flavors.

- Enter the command below to list all available flavors.

```
ubuntu@workstation:~$ openstack flavor list
```

```
ubuntu@workstation:~$ openstack flavor list
+---+-----+-----+-----+-----+-----+-----+
| ID | Name | RAM | Disk | Ephemeral | VCPUs | Is Public |
+---+-----+-----+-----+-----+-----+-----+
| 1 | m1.tiny | 512 | 1 | 0 | 1 | True |
| 2 | m1.small | 2048 | 20 | 0 | 1 | True |
| 3 | m1.medium | 4096 | 40 | 0 | 2 | True |

| ram | 2048 |
| rxtx_factor | 1.0 |
| swap | 1 |
| vcpus | 1 |
+-----+
ubuntu@workstation:~$
```

### Tip

Use the `openstack help image` command to determine how to list all images.

- Enter the command below to list all available images.

```
ubuntu@workstation:~$ openstack image list
```

```
ubuntu@workstation:~$ openstack image list
+-----+-----+-----+
| ID      | Name          | Status |
+-----+-----+-----+
| 2c57a4c3-1681-433d-a0f0-091fa99057ad | cirros-0.6.2-x86_64-disk | active |
| b6e959dd-7ad1-409f-966c-9c34eee29b36 | ubuntu           | active |
+-----+-----+-----+
ubuntu@workstation:~$
```

### Tip

Use the `openstack help network` command to determine how to list all networks.

- Enter the command below to list all available networks.

```
ubuntu@workstation:~$ openstack network list
```

```
ubuntu@workstation:~$ openstack network list
+-----+-----+-----+
| ID      | Name    | Subnets   |
+-----+-----+-----+
| c2b73520-f786-4891-85d7-5474ff485db6 | private | 5073e887-6c34-4018-9023-19ab46028a6c, 64e819da-079c-4cff-8f54-2bc03c26f95e |
| d787b1d5-d630-4c1d-9274-4d4fd092223b | shared   | eaeafc117-3488-4d12-884f-13e77b53cae3

+-----+-----+-----+
ubuntu@workstation:~$
```

- Enter the command below to create a new instance with the name **prod-instance**, using **ubuntu** as the image, **m1.small** as the flavor, and **shared** as the network.

```
ubuntu@workstation:~$ openstack server create \
> --image ubuntu \
> --flavor m1.small \
> --network shared \
> --wait prod-instance
```

```
ubuntu@workstation:~$ openstack server create \
> --image ubuntu \
> --flavor m1.small \
> --network shared \
> --wait prod-instance

### Tip

When typing the command, make sure there is a space between `ubuntu` and the `\`, and press **Enter** to get the `>` and continue typing the rest of the command.

12. Use the `openstack server list` command to list all the available instances.

```
ubuntu@workstation:~$ openstack server list
```

```
ubuntu@workstation:~$ openstack server list
+-----+-----+-----+-----+-----+
| ID | Name | Status | Networks | Image | Flavor |

### Tip

The UUID for the instance **prod-instance** can be used in place of **prod-instance** in the above command to identify the instance.

14. Enter the command below to verify the log for the instance.

```
ubuntu@workstation:~$ openstack console log show prod-instance
```

```

15. Enter the command below to display the instance's console URL. Pipe the command to grep so that you will get a link in the terminal you can click on. Then right click on the URL and select **Open Link**.

```
ubuntu@workstation:~$ openstack console url show prod-instance grep https:
```

16. The web browser will open directly to the instance's console through noVNC. Log into **prod-instance** using **root** as the username and **secret** as the password. Then use the ping command to verify connectivity with the DHCP server (**192.168.233.2**).

```
$ ping -c3 192.168.233.2
```

```
Connected to QEMU (Instance-00000002)

root@prod-instance:~# ping -c8 192.168.233.2
PING 192.168.233.2 (192.168.233.2) 56(84) bytes of data.
64 bytes from 192.168.233.2: icmp_seq=1 ttl=64 time=5.85 ms
64 bytes from 192.168.233.2: icmp_seq=2 ttl=64 time=3.25 ms
64 bytes from 192.168.233.2: icmp_seq=3 ttl=64 time=1.59 ms

--- 192.168.233.2 ping statistics ---
3 packets transmitted, 3 received, 0% packet loss, time 2005ms
rtt min/avg/max/mdev = 1.585/3.559/5.849/1.754 ms
root@prod-instance:~# _
```

17. Close the web browser and change focus back to the previous terminal window.
18. Enter the command below to stop the instance

```
ubuntu@workstation:~$ openstack server stop prod-instance
```

```
ubuntu@workstation:~$ openstack server stop prod-instance
ubuntu@workstation:~$ _
```

19. **prod-instance** should now be in the SHUTOFF state. Enter the command below to verify this.

```
ubuntu@workstation:~$ openstack server list
```

```
ubuntu@workstation:~$ openstack server list
+-----+-----+-----+-----+-----+
| ID      | Name     | Status   | Networks       | Image    | Flavor   |
+-----+-----+-----+-----+-----+
| 14bce2df-cb40-4ce5-8f4b-2daff2cc8b99 | prod-instance | SHUTOFF | shared=192.168.233.116 | ubuntu | m1.small |
+-----+-----+-----+-----+-----+
```

20. Enter the command below to delete the instance.

```
ubuntu@workstation:~$ openstack server delete prod-instance
```

```
ubuntu@workstation:~$ openstack server delete prod-instance
ubuntu@workstation:~$ _
```

21. The lab is now complete.
