About This Document

- This document was developed by a team at the University of Tennessee at Chattanooga led by Dr. Mengjun Xie (mengjun-xie@utc.edu).
- The development of this document was supported by a National Centers of Academic Excellence in Cybersecurity Grant (#H98230-20-1-0351), housed at the National Security Agency.
- This document is licensed with a Creative Commons Attribution 4.0 International License.

Introduction

In this lab, you will manage projects, users, and roles.

Objectives

- Create and delete projects using the *Horizon Dashboard*.
- Create and delete projects using the *OpenStack Unified CLI*.
- Manage users using the *Horizon Dashboard*

Lab Settings

The information in the table below will be needed in order to complete the lab. The task sections below provide details on the use of this information.

Virtual Machine	IP Address	Account	Password
workstation	ens3: 192.168.1.21 ens4: 172.25.250.21	ubuntu	ubuntu
devstack	ens3: 192.168.20 ens4: 172.25.250.20	ubuntu	ubuntu

1 Create and Delete Projects Using the Horizon Dashboard

In this task, you will create and delete projects using the *Horizon Dashboard*.

- 1.1. Log into the **workstation** machine as the **ubuntu** user with password **ubuntu**.

```
Ubuntu 18.04.6 LTS workstation tty1
workstation login: ubuntu
Password:
```

- 1.2. Launch the graphical user interface.

```
ubuntu@workstation:~$ startx
```

```
Welcome to Ubuntu 18.04.6 LTS (GNU/Linux 4.15.0-213-generic x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:     https://landscape.canonical.com
 * Support:        https://ubuntu.com/advantage

 System information as of Fri Jun  7 21:01:55 UTC 2024

 System load:  0.6              Processes:           197
 Usage of /:   7.9% of 116.12GB  Users logged in:    0
 Memory usage: 13%              IP address for ens3: 192.168.1.21
 Swap usage:   0%              IP address for ens4: 172.25.250.21

 Expanded Security Maintenance for Infrastructure is not enabled.

 2 updates can be applied immediately.
 To see these additional updates run: apt list --upgradable

 146 additional security updates can be applied with ESM Infra.
 Learn more about enabling ESM Infra service for Ubuntu 18.04 at
 https://ubuntu.com/18-04

ubuntu@workstation:~$ startx_
```

- 1.3. Open the web browser.

- 1.4.** Enter the IP address of the **devstack** machine (**192.168.1.20**) into the address bar, and log into the OpenStack Horizon Dashboard. The username is **admin** and the password is **secret**.

Log in

User Name

Password

Sign In

- 1.5.** Create a project named **dev**. First, navigate to **Identity > Projects**, then click on **Create Project**.

Name	Description	Project ID	Domain Name	Enabled	Actions
admin	Bootstrap project for initializing the cloud.	6328a8abcf994977b8c01140884a130c	Default	Yes	Manage Members
service		64f81ae8ba4443aabec0228cd571fc	Default	Yes	Manage Members
demo		a077ab0519ac4a588dfcb7d7c31085	Default	Yes	Manage Members
invisible_to_admin		c1f778ac7718494ab7945e638662ac26	Default	Yes	Manage Members
alt_demo		f50dc27796f649e3b383625da5c37d37	Default	Yes	Manage Members

- 1.6.** Enter **dev** in the *Name* field and **Dev Project** in the *Description* field. Leave the **Enabled** check box selected, then click on **Create Project**.

Create Project

Project Information * [Project Members](#) [Project Groups](#)

Domain ID	default
Domain Name	Default
Name *	dev
Description	Dev Project
Enabled	<input checked="" type="checkbox"/>

[Cancel](#) [Create Project](#)

Note

Notice the **dev** project now appears in the *Horizon Dashboard*.

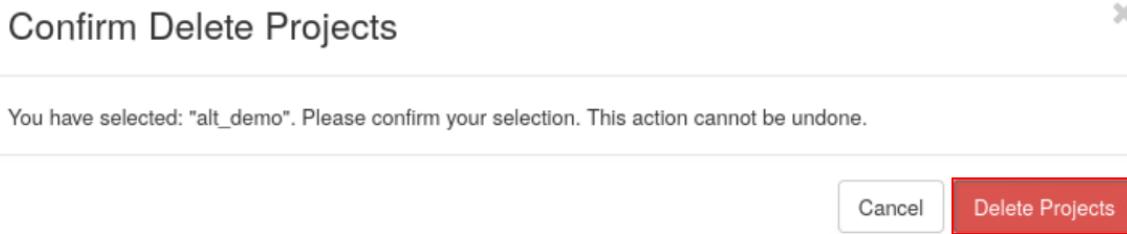

- 1.7.** Suppose that the **alt_demo** project is no longer needed and can be deleted. To delete this project, click the checkbox in the same row as **alt_demo**, then click **Delete Projects**.

Name	Description	Project ID	Domain Name	Enabled	Actions
demo		39e851b14f864573aad60582c35e40dc	Default	Yes	<button>Manage Members</button>
<input checked="" type="checkbox"/> alt_demo		3d65ee93169c4e4fc87a7398e2e	Default	Yes	<button>Manage Members</button>
dev	Dev Project	710f8a9f6ded43189d6655e16cae77bc	Default	Yes	<button>Manage Members</button>
service		b66a24ad2cc49b79ca1e0c07b3b3258	Default	Yes	<button>Manage Members</button>
invisible_to_admin		bb23f57aff584133a0657ee0fc7fd3f	Default	Yes	<button>Manage Members</button>
admin	Bootstrap project for initializing the cloud.	eb2dc08d8ae46ffac3f16c3973ef61d	Default	Yes	<button>Manage Members</button>

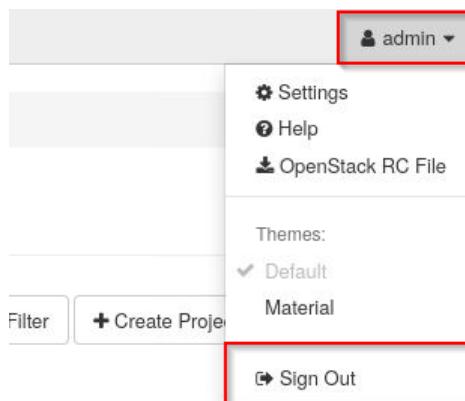

Tip

The above method allows selecting and deleting multiple projects at once. A single project can also be deleted by clicking the dropdown in the same row as the project in the **Actions** column and clicking **Delete Project**.

- 1.8. In the **Confirm Delete Projects** popup box, click **Delete Projects**.

- 1.9. Log out of the Horizon Dashboard by clicking on admin at the top right and selecting **Sign Out**.

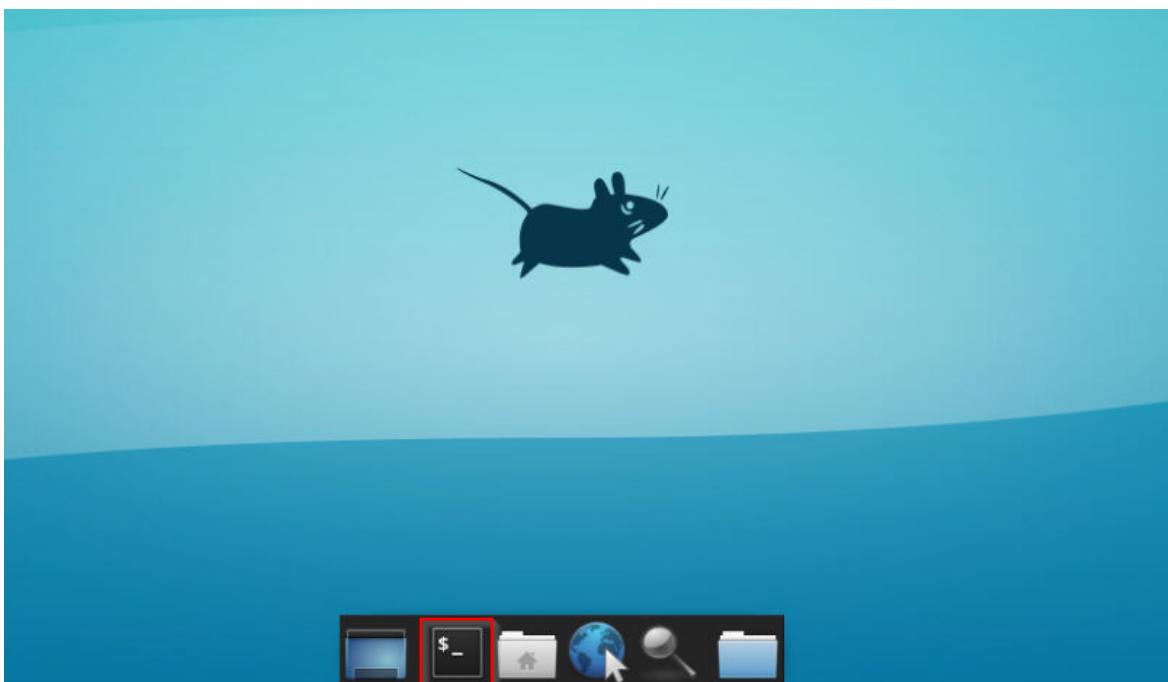

- 1.10. Close the web browser and continue to the next task.

2 Create and Delete Projects Using the OpenStack Unified CLI

In this task, you will use the *OpenStack Unified CLI* to create and delete a project from the command line.

- 2.1. Open a terminal, either by right-clicking the desktop and selecting **Open Terminal Here**, by clicking the terminal icon in the icon bar at the bottom of the screen, or by selecting **Applications** at the top left of the screen, then selecting **Terminal Emulator**.

- 2.2. Use the **source** command with the **keystonerc-admin** argument to access OpenStack as the admin.

```
ubuntu@workstation:~$ source ~/keystonerc-admin
```

```
ubuntu@workstation:~$ source ~/keystonerc-admin
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 2.3. List the existing OpenStack projects.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project list
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project list
+-----+-----+
| ID      | Name   |
+-----+-----+
| 39e851b14f864573aad60582c35e40dc | demo   |
| 710f8a9f6ded43189d6655e16cae77bc | dev    |
| b66a24ad2cc49b79cale0c07b3b3258 | service |
| bb23f57aff584133a0657ee0fc7ffd3f | invisible_to_admin |
| eb2dcd08d8ae46ffac3f16c3973ef61d | admin   |
+-----+-----+
[ubuntu@workstation (keystone-admin)]:~$ █
```

2.4. Create a project named **testing**.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project create \
> --description testing \
> --enable testing
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project create \
> --description testing \
> --enable testing
+-----+-----+
| Field      | Value   |
+-----+-----+
| description | testing |
| domain_id  | default |
| enabled     | True    |
| id          | 012e3f171c4a47be8019a612656a2df9 |
| is_domain   | False   |
| name        | testing |
| options     | {}      |
| parent_id   | default |
| tags        | []     |
+-----+-----+
[ubuntu@workstation (keystone-admin)]:~$ █
```

Tip

When typing the command make sure there is a space between **create** and the ****, and press **Enter** to get the **>** and continue typing therest of the command.

2.5. Verify the project has been created.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project list
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project list
+-----+-----+
| ID      | Name   |
+-----+-----+
| 012e3f171c4a47be8019a612656a2df9 | testing
| 39e851b14f864573aad60582c35e40dc | demo
| 710f8a9f6ded43189d6655e16cae77bc | dev
| b66a24ad2cccd49b79cale0c07b3b3258 | service
| bb23f57aff584133a0657ee0fc7ffd3f | invisible_to_admin
| eb2dcd08d8ae46ffac3f16c3973ef61d | admin
+-----+-----+
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 2.6. The **dev** project from the previous step will be used throughout the remainder of the lab. The **testing** project was only created for demonstration and can be safely deleted. Delete the **testing** project.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project delete testing
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project delete testing
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 2.7. Verify the **testing** project has been deleted by listing the projects again and noting that **testing** no longer appears.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project list
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack project list
+-----+-----+
| ID      | Name   |
+-----+-----+
| 39e851b14f864573aad60582c35e40dc | demo
| 710f8a9f6ded43189d6655e16cae77bc | dev
| b66a24ad2cccd49b79cale0c07b3b3258 | service
| bb23f57aff584133a0657ee0fc7ffd3f | invisible_to_admin
| eb2dcd08d8ae46ffac3f16c3973ef61d | admin
+-----+-----+
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 2.8. Leave the terminal window open and continue to the next task.

3 Managing Users Using the Horizon Dashboard

In this task, you will use the *Horizon Dashboard* to manage users.

- 3.1. Open the web browser, navigate to the OpenStack login page at <http://192.168.1.20>, and log in with username **admin** and password **secret** as before. In the following steps, you will create users named **cloud-dev**, **cloud-test1**, and **cloud-test2**; set all of these account passwords to **secret**; and add these accounts to the **dev** project.
- 3.2. First, navigate to **Identity > Users** and click on **Create User**.

User Name	Description	Email	User ID	Enabled	Domain Name	Actions
admin	-		14f5376f00c04e90b7103dd8d4263040	Yes	Default	<button>Edit</button>
demo	-	demo@example.com	603b42080bb549d7ad3217eb456e7a55	Yes	Default	<button>Edit</button>

- 3.3. In the *Create User* dialog box, enter **cloud-dev** in the *User Name* field, and **secret** in the *Password* and *Confirm Password* fields.

Create User

**Domain ID**

default

Domain Name

Default

User Name *

cloud-dev

Description:

Create a new user and set related properties including the Primary Project and Role.

Description**Email****Password *** **Confirm Password *** **Tip**

You may need to use the scroll bar on the right side of the dialog box to see the rest of the fields.

- 3.4.** After scrolling down if necessary, select the **dev** project from the *Primary Project* drop down. Leave the *Role* set to **member**, and leave the **Enabled** check box selected. Click on **Create User**.

Password *

Confirm Password *

Role

Enabled

Lock password

Create User

3.5. Repeat steps 2 through 4 to create the **cloud-test1** and **cloud-test2** user accounts.

3.6. Delete the **cloud-test1** user account. On the *Users* tab, select the **cloud-test1** user account checkbox and click on **Delete Users** and then confirm the deletion in the popup box that follows.

User Name	Description	Email	User ID	Enabled	Domain Name	Actions

Save

3.13. Log out of the dashboard and log back in as **cloud-test2** with the password **password** to verify the password has been changed.

3.14. Log out of the dashboard and close the web browser. Continue to the next task.

4 Managing Users Using the OpenStack Unified CLI

In this task, you will manage users using the *OpenStack Unified CLI*.

- 4.1. Open a terminal if you do not already have one running, and navigate to the home directory.
- 4.2. Source the credential for **admin** using the **keystonerc-admin** file.

```
ubuntu@workstation:~$ source ~/keystonerc-admin
```

```
ubuntu@workstation:~$ source ~/keystonerc-admin
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 4.3. List the existing OpenStack users.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack user list
```

- 4.22. Leave the terminal window open and continue on to the next task.

5 Assigning User Roles and Privileges Using the Horizon Dashboard

In this task, you will assign user roles privileges using the *Horizon Dashboard*.

- 5.1. Open the web browser, navigate to the OpenStack login page at <http://192.168.1.20>, and log in with username **admin** and password **secret** as before.
- 5.2. Navigate to **Identity > Users** and click on the **Create User** button.

User Name	Description	Email	User ID	Enabled	Domain Name	Actions
admin	-		be70ca5c1a9e46eb8be7b25a6cd18ba	Yes	Default	Edit

- 5.3. Create the **cloud-admin** user with **admin** privileges. In the dialog box, enter **cloud-admin** in the *User Name* field, and enter **secret** in the *Password* and *Confirm Password* fields. Select the **dev** project from the *Primary Project* dropdown, and select **admin** in the *Role* dropdown. Finally, leave the **Enabled** checkbox selected and click the **Create User** button.

5.7. Log out of the dashboard, close the web browser, and continue to the next task.

6 Assigning User Roles and Privileges Using the OpenStack Unified CLI

In this task, you will assign user roles and privileges using the *OpenStack Unified CLI*.

- 6.1. Open a terminal window if one is not already running.
- 6.2. Source the `~/keystonerc-admin` keystone credentials file for the **admin** user.

```
ubuntu@workstation:~$ source ~/keystonerc-admin
```

```
ubuntu@workstation:~$ source ~/keystonerc-admin
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 6.3. Create the user **cloud-admin2** with the password **secret**, and make it a member of the **dev** project.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack user create \
> --password secret \
> --project dev \
> cloud-admin2
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack user create \
> --password secret \
> --project dev \
> cloud-admin2
+-----+-----+
| Field | Value |
+-----+-----+
| default_project_id | 710f8a9f6ded43189d6655e16cae77bc |
| domain_id | default |
| enabled | True |
| id | c7668a3ea7bb4793ab50fbcc7392799c8 |
| name | cloud-admin2 |
| options | {} |
| password_expires_at | None |
+-----+-----+
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 6.4. The user **cloud-admin2** is not assigned a role by default and must be assigned one. Assign the **admin** user role to the **cloud-admin2** user.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack role add \
> --user cloud-admin2 \
> --project dev \
> admin
```

```
[ubuntu@workstation (keystone-admin)]:~$ openstack role add \
> --user cloud-admin2 \
> --project dev \
> admin
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 6.5. Verify that the **cloud-admin2** is in the **admin** user role for the **dev** project.

```
[ubuntu@workstation (keystone-admin)]:~$ openstack role assignment list \
> --user cloud-admin2 \
> --project dev \
> --names
```

Role	User	Group	Project	Domain	Inherited
admin	cloud-admin2@Default		dev@Default		False

```
[ubuntu@workstation (keystone-admin)]:~$ █
```

- 6.6. Next, the admin role for **cloud-admin2** will be used to perform an admin action. In particular, the admin privileges of **cloud-admin2** will be used to delete another user. First, follow steps 8 and 9 from Section 4 to create the `~/keystonerc-cloud-admin2` keystone credentials file for the **cloud-admin2** user.
- 6.7. Source the `~/keystonerc-cloud-admin2` keystone credentials file for the **cloud-admin2** user.

```
[ubuntu@workstation (keystone-admin)]:~$ source ~/keystonerc-cloud-admin2
```

```
[ubuntu@workstation (keystone-admin)]:~$ source ~/keystonerc-cloud-admin2
[ubuntu@workstation (keystone-cloud-admin2)]:~$ █
```

- 6.8. List the current OpenStack users to see the list of users that can be deleted.

```
[ubuntu@workstation (keystone-cloud-admin2)]:~$ openstack user list
```

```
[ubuntu@workstation (keystone-cloud-admin2)]:~$ openstack user list

6.9. Delete the **cloud-user1** user.

```
[ubuntu@workstation (keystone-cloud-admin2)]:~$ openstack user delete cloud-user1
```

```
[ubuntu@workstation (keystone-cloud-admin2)]:~$ openstack user delete \
> cloud-user1
[ubuntu@workstation (keystone-cloud-admin2)]:~$ █
```

6.10. List the users again to confirm that **cloud-user1** was deleted.

```
[ubuntu@workstation (keystone-cloud-admin2)]:~$ openstack user list
```

```
[ubuntu@workstation (keystone-cloud-admin2)]:~$ openstack user list
